FREE 90-DAY PILOT FOR COUNTY JAILS

Every inmate message, screened immediately.

AI reads your live message feed and flags threats, contraband and fraud for your staff in seconds.

What it does

- Screens every message the moment it arrives on your vendor's feed.
- Flags threats, contraband, escape plans, weapons, card and bank numbers, coded language.
- Ranked queue with category, confidence and the reason.
- It never blocks. Your staff make every decision.

Tested on real messages

16 of 16

threats caught (recall 100%, 95% CI 81 to 100%)

50 of 54

card and bank numbers caught (93%)

Built by a team that has handled nearly 10 million real messages written by incarcerated people.

Sample of 1,298 real messages written by people in federal facilities, labelled by two independent AI reviewers. Contraband and other categories are in calibration; your pilot measures every category on your own traffic.

Guardrails

- Attorney and privileged contacts never screened or stored.
- Your messages never train models.
- Named users, MFA, full audit log.
- Your retention rules. US-hosted, encrypted.
- Controls modeled on the FBI CJIS Security Policy; formal CJIS work starts when you sign a purchase agreement.

You get

- Screening of every message for 90 days
- Review-queue accounts for your intel unit
- A weekly summary
- A day-90 readout with accuracy measured on your traffic

We need

- Access to your messaging vendor's feed (we prepare the request)
- One point of contact and your privileged-contact list
- About 30 minutes a week to label a sample

No cost, no purchase contract, no auto-renewal, nothing installed. A short no-cost pilot letter puts the guardrails in writing.
